

B1
amended

first, second, third and fourth polarized light converting elements are controlled so that the three primary lights to be emitted to said transmission optical modulating element can be controlled on the time-division basis.

A marked-up version of these claims is attached to show the changes made to these claims.

REMARKS

This amendment cancels claim(s) to reduce the filing fee. Please enter this amendment before calculating the filing fee.

Respectfully submitted,

Terryence F. Chapman

Marked-up Version of Amended Claims

March 25, 2002
Page 1

17. (Amended) A video projector, comprising the polarized color filter according to claim 5, ~~claim 6, claim 7, claim 8, claim 9, claim 10, claim 11, claim 12 or claim 13,~~ wherein the reflection optical modulating element is provided on the emission side of said polarized light color filter; the projection lens is provided on the non-emission side of said polarized light color filter; the three primary lights to be emitted to said reflection optical modulating element from said polarized light color filter are controlled on the time-division basis by controlling the voltages applied to the first, second and third polarized light converting elements.

18. (Amended) The video projector, comprising the polarized light color filter according to claim 5, ~~claim 6, claim 7, claim 8, claim 9, claim 10, claim 11, claim 12 or claim 13,~~ wherein the sequential transmission optical modulating element and the projection lens are provided on the emission side of said polarized light color filter, and the voltages applied to the first, second and third polarized light converting elements are controlled so that the three primary lights to be emitted to said transmission optical modulating element from said polarized light color filter can be controlled on the time-division basis.

19. (Amended) The video projector, comprising the polarized light color filter according to claim 14, ~~claim 15 or claim 16,~~ wherein the reflection optical modulating element is provided on the emission side of said polarized light color filter while providing the projection lens on the non-emission side, and the voltages applied to the first, second, third and fourth polarized light converting elements are controlled so that the three primary lights to be emitted to said reflection optical modulating element from said polarized light color filter can be controlled on the time-division basis.

20. (Amended) The video projector, comprising the polarized light color filter according to claim 14, ~~claim 15 or claim 16~~, wherein the sequential transmission optical modulating element and the projection lens are provided on the emission side of said polarized light color filter, and the voltages applied to the first, second, third and fourth polarized light converting elements are controlled so that the three primary lights to be emitted to said transmission optical modulating element can be controlled on the time-division basis.
